DIRECTIONS FOR USE

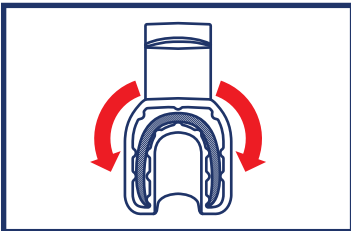

Users are to follow all applicable safety standards and regulations specified by the Operating Authority.

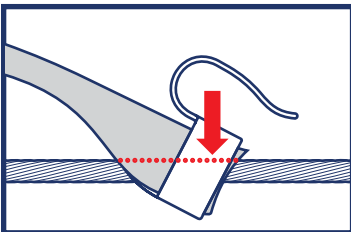

1. Feed conductor cover into pointed end of tool

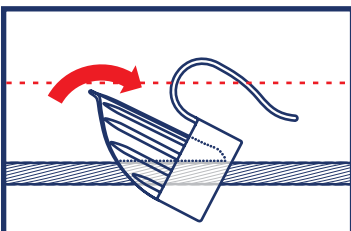

2. Push through until flush with back side of tool

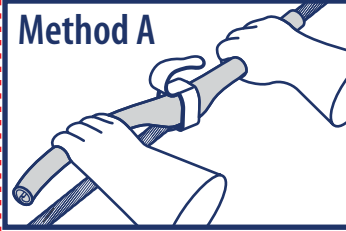

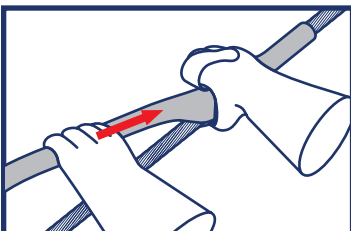

3. Ensure profile is centered on tool with sides down equally

4. Push tool down onto wire until it sits flat on the inner channel

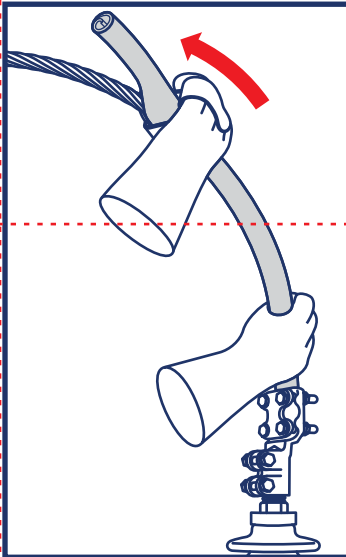

5. Feed conductor cover through tool, ensure profile encloses the wire completely

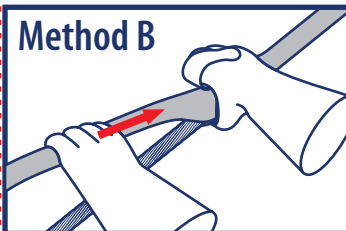

Method A

- 6A. Grip installed conductor cover on wire and change hands to hold the tool

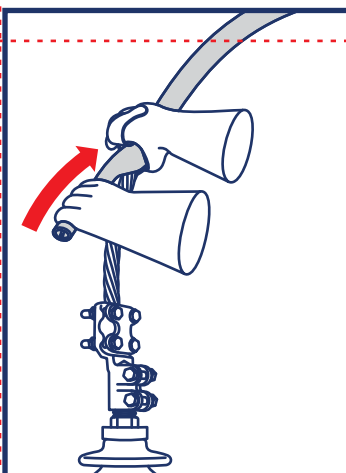

- 7A. Slide the tool along the wire with the installed cover remaining stationary

Method B

- 6B. Continue feeding the conductor cover through with the tool remaining stationary

- 7B. Push through up to end, grip conductor cover behind tool and slide through end
